SMPM Connectors

Wood Dale, IL– February 2009 – The Phoenix Company of Chicago introduces a new series of SMPM Connectors to its product line.

30% smaller than SMP blindmate connectors, the SMPM series provide a smaller lighter-weight solution in high-performance applications where space is a premium. Phoenix's SMPM series subminiature connectors offer superior electrical performance from DC to 26.5 GHz. Connectors are designed for rugged environments and feature snap-in interconnects allowing control while mating multiple connectors. All products manufactured to Mil-Std-348.

Features to note:

- Subminiature size for high-density applications.
- Snap feature for quick mating and reduced assembly time.
- Axial alignment reduces stress from multiple blindmate connections.
- Gang mating possible. Compensates for up to .010" radial and axial misalignment (when used with an adapter).
- Center-to-Center spacing of .135".

Phoenix's SMPM Connectors are ideal for: **blind mate telecommunications, active antennas, phased arrays, airborne platforms, ship and ground radar, satellite communications, and military applications.**

*Meet RoHS compliancy standards.

For more information, please contact The Phoenix Company of Chicago at (800) 323-9562.
